

CYBERSECURITY

Cybercriminals are increasingly evasive and ambitious, while their techniques continue to evolve. As businesses and organizations adopt emerging technologies, a comprehensive security strategy becomes an essential part of their operations.

Security is no longer a stand-alone practice. Cyber threats have permeated all aspects of information technology and they cannot be addressed by “products” alone. Cybersecurity is a process employed within an architecture that must be built into the core of your business strategy.

At Axelliant, our focus is to help your organization adopt digital transformation and speed up time to market without compromising security. With our defined methodology and customized security architecture we can help you turn your security vision into a reality.

1

MANAGED VULNERABILITY ASSESSMENT (MVA)

As your MVA partner, Axelliant adds tremendous value by taking some of the day-to-day burden off your in-house team's shoulders. More importantly, we bring deep expertise and best-in-class technology to help you better manage risks.

2

MANAGED DETECTION AND RESPONSE (MDR)

We bring global knowledge and deep experience to the frontlines of your cyber defense. We work in all industries to understand their business needs, design scalable and cost-effective solutions, and implement the vital security strategies.

3

SECURITY CONSULTING (SC)

The traditional approach of investing in resources only is no longer a viable option. Organizations need to adopt intelligent tools and technologies to understand the threats and risks to create better defenses and increase resilience.

4

GOVERNANCE, RISK, AND COMPLIANCE (GRC)

Governance, risk management, and compliance have, in some form, always been a part of the business landscape. In the digital age, however, the GRC practices of many organizations has not evolved with the advancement and evolution of technologies.

5

SECURITY AS A SERVICE BUNDLE (SaaS)

The trend to a distributed workforce continues to rise, bringing newfound benefits for employers and workers. Axelliant's Security as a Service bundle unifies user and device protection while helping your workforce to collaborate at anytime from anywhere.
